

QUICKfence

Deluxe Style

Fences to fixed enclosures in country states, houses, communities, business parks, shopping centers, domestic animals' enclosures, golf courses, sport areas, etc.

The panel is made of galvanized wire to safeguard the product. It is a unique shape with reinforced folds placed at set heights which makes QUICKfence panels very stiff and good looking.

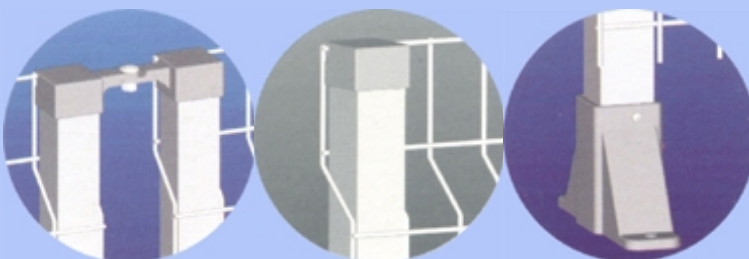

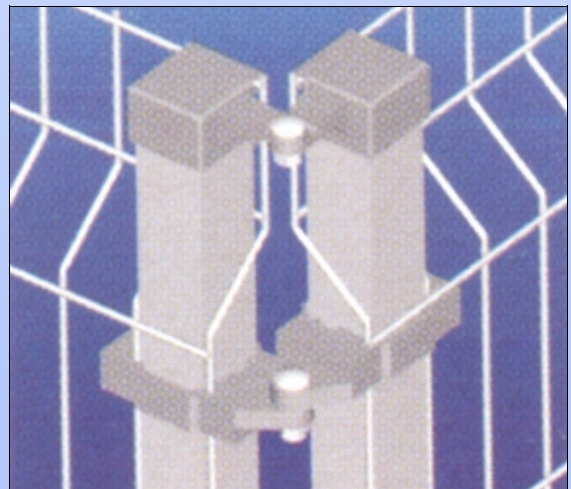

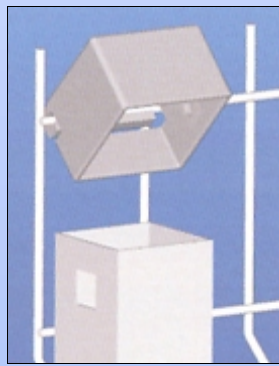

The offset ends on one of the sides allow you to install it on the upper or lower side, depending on your requirements.

The top cap keeps the post and panel together and prevent water from entering the post. This improves corrosion resistance and the material itself resists bad weather.

You can fit the panel to any length by cutting to size and inserting the panel and top cap in the last folds. This feature can be used to reinforce the fence with intermediate posts.

The gates are very simple and very easy to assembly. Installation is quick. You just fix the base support to concrete and join the upright post or cast into concrete. No tools are necessary.
